

Leetmates Push Notifications Troubleshooting Guide

Follow these step-by-step instructions to ensure desktop and extension alerts are enabled for your browser.

Quick Tip: Desktop notifications require permissions at two levels: first within your Operating System, and second inside Google Chrome settings.

1 Step 1: Operating System Setup

Before Chrome can trigger desktop pop-ups, your operating system must grant permission for Google Chrome to deliver notifications.

Windows (10 & 11)

WINDOWS OS

1. Open **Settings** (Win + I) and navigate to **System > Notifications**.
2. Ensure the main **Notifications** toggle is set to **On**.
3. Scroll to *Get notifications from these senders* and locate **Google Chrome**.
4. Toggle **Google Chrome** to **On** and verify banner alerts are allowed.

macOS

MACOS

1. Open **System Settings** from the Apple menu.
2. Click **Notifications** in the left sidebar and select **Google Chrome**.
3. Toggle on **Allow notifications**.
4. Select your preferred alert style (**Banners** or **Alerts**).

Linux (Ubuntu / GNOME)

LINUX

1. Open system **Settings** and select **Notifications** from the menu.
2. Ensure global **Notifications** are toggled **On**.
3. Select **Google Chrome** in the app list and verify permissions are enabled.

Important (Focus / Do Not Disturb): Turn off OS-level Focus or Do Not Disturb mode (Focus Assist on Windows, Focus on macOS), or add Google Chrome as an allowed exception so notifications aren't silenced automatically.

2 Step 2: Chrome Browser & Extension Permissions

After enabling OS-level permissions, verify Chrome's internal site and extension permissions are configured correctly.

A. Global Chrome Notification Settings

BROWSER SETTINGS

1. In Chrome, click the **Three Dots** (⋮) in the top-right corner and select **Settings**.
2. In the left panel, click **Privacy and security**, then open **Site settings**.
3. Scroll down to **Permissions** and click **Notifications**.
4. Under *Allowed to send notifications*, confirm that the **Leetmates** extension is listed.

B. Extension-Specific Permissions

EXTENSION

1. Navigate to `chrome://extensions` in your browser address bar.
2. Locate **Leetmates** and click **Details**.
3. Ensure the main extension toggle is **Enabled**.
4. Verify that all requested permissions, including **Notifications**, are allowed.
